VYVGART® Patient Support Program

## Storing and handling your VYVGART®, step by step

# Receiving VYVGART®

## USEFUL INFORMATION IF YOU HAVE CHOSEN TO RECEIVE YOUR VYVGART® INFUSION AT HOME

- 1 Your pharmacist will call you ahead of your infusion to arrange delivery of your VYVGART® prescription.
- 2 Make sure you, a caregiver, or a designated family member is home to receive the delivery. If plans change, the delivery date/time may need to be adjusted. If this occurs, be sure to call your pharmacy as soon as possible to reschedule the delivery.
- 3 Upon receipt of your VYVGART® shipment, be sure to inspect the packaging and all contents for any damage to the box or vials. Report any damage to your MyPATH Nurse Case Manager.

***VYVGART® is packaged in 400 mg/20 mL (20 mg/mL) vials, with 1 single-dose vial per carton.***

- 4 Place the contents of your VYVGART® shipment in the refrigerator.
- 5 If your VYVGART® shipment does not arrive as expected, contact your MyPATH Nurse Case Manager.

# VYVGART® should be refrigerated until time of use

Refrigerate between 2°C and 8°C (36°F and 46°F) in the original carton.

- Protect from light until the time of use.
- Do not freeze.
- Do not shake.
- Allow to reach room temperature before administering.
- Do not heat.

**YOUR INFUSION NURSE WILL REMOVE THE CARTON FROM THE FRIDGE BEFORE YOUR INFUSION.**

## WHAT TO DO IN THE EVENT OF A POWER OUTAGE?

### **If you are expecting a delivery of VYVGART®:**

- Call your MyPATH Nurse Case Manager to inform them of the power outage and to discuss next steps.

### **If you have VYVGART® stored in your fridge:**

- Keep your fridge closed. Most refrigerators will hold a stable temperature for ~4 hours during a power outage.

**Contact your MyPATH Nurse Care Manager if you have any questions or concerns.**
